

PLEASE NOTE: THE FRONT-END (REACT) FILE WAS TOO BIG FOR THE GIT REPO,  
PLEASE DOWNLOAD AT: <http://www.mediafire.com/file/5dehuwcu238yg8b/react-weather-bot.zip/file>

### Project Breakdown:

Renan was responsible for doing the server side which is all the node work and he also did the integration between the parts (dialogflow, nodejs server, react front-end)

Vanderson has worked on the dialogflow commands and setup as well as in the react front-end.

A screenshot of the working app may be found below:

A video may also be found on the github repository as well as this picture.

The bot works with general conversations such as “Hello” “How are you” and it works to tell the user which clothes it should wear based on a city and it’s weather “What’s the weather in Cork?” “What should I wear in Rio de Janeiro” “Is it hot in Salvador?”, It has also commands to explain a little bit about our works those are “Renan” “Vanderson” and the bot will tell you what each of us has done.

For the installation of this project please have nodejs, npm installed and use npm for all the dependencies specified in the package-lock.json files (both in server and react).
